

GETTING YOU THE RIGHT TREATMENT, FASTER,
BECAUSE TIME MATTERS.

CIRCULOGENE

At CIRCULOGENE, we know that receiving a cancer diagnosis is a life-altering moment. **It is our mission to give you and your doctor the most accurate information, as quickly as possible, so that you can start the right treatment right away.**

What Is Liquid Biopsy?

Liquid biopsy is a new, noninvasive technique that can detect cancer biomarkers in your blood. It is a simple blood test that gives a more complete picture of your tumor and any cancer-causing DNA and RNA in your bloodstream.

Why Do I Need a Liquid Biopsy AND a Tissue Biopsy?

Tissue biopsies have been the standard for many years and doctors still use them every day. However, the latest research shows that tissue samples sometimes do not include enough of the tumor tissue. They can be especially difficult for hard-to-reach tumors. Liquid biopsy is a noninvasive technique that can be combined with traditional tissue biopsy to ensure that your doctor has the most accurate, appropriate and timely information.

What Will This Test Do for Me?

With you and your clinician ordering the CIRCULOGENE molecular test, you are taking control of your health utilizing state-of-the-art technology. The efficiency of CIRCULOGENE diagnostics not only empowers your doctor to accurately profile the tumor but also closely monitor tumor responsiveness and adjust treatment protocols as necessary.

Noninvasive Precision Medicine

You experience a simple procedure that only requires a small blood sample.

Accurate Identification of Tumor Genes with Matching Treatment

We locate and capture cell-free DNA, identify and quantify any tumor mutations, and provide information on current FDA-approved treatment options.

Fast Results

Your turnaround time is significantly faster than tissue biopsy results.

Track Responsiveness Frequently

Your doctor is empowered to closely monitor tumor responsiveness and adjust treatment protocols.

**ONE TUBE, ONE WEEK, COMPLETE RESULTS FOR
DNA, RNA, MSI, AND PD-L1.**

It is important to emphasize that CIRCULOGENE's test is not a diagnosis of cancer and a negative result does not necessarily guarantee that a person is cancer-free. There are numerous other types of genetic and non-genetic biomarkers that our analysis does not test. We recommend you discuss the results of your personalized gene profile with your doctor.
