

# Dear Patient,

At Circulogene, we are committed to providing you with the highest level of care using the latest advancements in medical testing. As part of our services, we may utilize Circulogene's CGP (Comprehensive Genomic Profile) testing, which is performed using a small blood sample to gather additional insights for your healthcare provider. This testing, combined with other clinical information, helps guide the next steps in your care plan.

To make the process as convenient as possible, we have partnered with a home phlebotomy service. This means a licensed professional will visit your home to collect your blood sample, eliminating the need for you to visit a lab. Here's what you can expect:

## Scheduling Your Appointment

Within 24-72 hours, you will receive a call from a home phlebotomy representative to arrange a convenient time for the visit. The appointment should only take 5-10 minutes.

## Preparing for the Blood Draw

### OPTION 1

A Blood Draw Kit will be sent to you via FedEx Overnight.

### OPTION 2

Contracted phlebotomy group will bring a test kit with them.

You may receive a letter from Circulogene regarding our process for working with your insurance. Please note, this is not a bill. Additionally, if you receive an Explanation of Benefits (EOB) from your insurance, it is for your records only, and no action is required on your part.

Circulogene will bill Medicare directly and accept Medicare payment as full payment. Most private insurance plans also cover Circulogene testing. If a private insurance company denies coverage, Circulogene will handle all appeals on your behalf. We are dedicated to ensuring you receive the necessary care, so if needed, our Financial Assistance Program is available to help cover any remaining costs.

For any questions or additional information regarding the testing process, please feel free to contact Circulogene directly at **855-614-7083**.

Thank you for choosing Circulogene. We are here to support you every step of the way.

*Sincerely,*

**THE CIRCULOGENE TEAM**

*Because it Matters*

## What Is Liquid Biopsy?

Liquid Biopsy is a simple, non-invasive blood test that detects and analyzes biomarkers such as DNA, RNA, and proteins in your bloodstream that might be relevant to potential health concerns or underlying conditions.

## Why Combine Liquid and Tissue Biopsy?

Combining liquid and tissue biopsies can provide a more comprehensive understanding of a disease state, enhancing diagnostic accuracy, treatment planning, and disease monitoring.

## How Does This Test Help Me?

The CIRCULOGENE molecular test provides your physician care team with valuable information to support early diagnosis, guide treatment decisions, and monitor treatment effectiveness.

### Noninvasive

Requires only a small blood sample.

### Accurate Results

Identifies genetic information and matches findings with FDA-approved options.

### Fast Turnaround

Delivers results more quickly than traditional methods.

### Responsive Monitoring

Enables frequent adjustments to care protocols.

## Comprehensive Biomarker Testing Results in One Week.

It's important to note that this test is not a diagnosis, and results should be discussed with your doctor for a full understanding of your health profile.
